

Lab: Create a Data Governance Plan for FutureMart

Estimated time: 60 minutes

Learning objectives

After completing this lab, you will be able to:

- Draft a data governance plan that addresses compliance and data protection
- Define the data governance objectives, purpose, and scope
- List data governance roles and responsibilities
- Describe best practices for data management, including data quality, data integration, and data classification
- List data security and privacy policies, such as data encryption and access control
- Define regulatory compliance and legal considerations while creating a data governance plan

Reference data governance plan

For example, refer to the data governance plan created for NeoTech University, a dedicated technology institute for shaping students' careers with innovation and research. Implementing a seamless data governance plan at NeoTech University fosters accountability and transparency in managing data. It ensures that the institutional data remains a reliable asset for academic, administrative, and research activities.

The [Sample Data Governance Plan for NeoTech University.pdf](#) will help you complete your lab sections.

Note: Right click on the link to open it in a new tab.

Template for data governance plan

Download the template [Template for Data Governance Plan.docx](#) to complete this lab.

You can also download the template in PDF format [Template for Data Governance Plan.pdf](#).

Note: Right click on the link to open it in a new tab.

Once you will design the data governance plan for FutureMart, save the document **Data governance plan for FutureMart.doc** or as a PDF file **Data governance plan for FutureMart.pdf**.

Introduction

A data governance plan is a structured framework that outlines policies, procedures, and responsibilities for managing organizations' data assets. It ensures data integrity, privacy, security, and regulatory compliance while aligning with the business objectives. Defining clear roles, standards, and best practices in data governance plans helps organizations enhance their data quality, mitigate risks, and make informed decisions. A well-structured data governance plan helps organization to maintain data quality, reliability, and trust between the vendor and the stakeholders.

The new data governance plan for FutureMart, the merged entity, should ensure effective data management, security, and compliance. In this lab, you will first define the objectives and scope and align governance initiatives with business goals and regulatory requirements, such as the General Data Privacy Regulations (GDPR).

Next, you will create a governance framework, select a model, and assign roles to data owners, stewards, custodians, and users. It's time to develop data policies and standards covering data privacy, security, quality rules, and metadata management.

Lastly, you will define the data governance processes for classification, access control, and quality management.

Scenario

FutureMart, a merged entity of TrendyThreads and FashionMart, aims to establish a unified, state-of-the-art enterprise architecture that seamlessly integrates with online and offline operations. This approach could be possible with strategic planning, efficient data migration, streamlined system integration, and rigorous governance, resulting in a cohesive, omnichannel customer shopping experience.

In **phase 1** of the data governance architect, you've thoroughly accessed the existing data architectures of TrendyThreads and FashionMart to determine gaps, inefficiencies, and improvement areas before the integration process.

In **phase 2**, you've designed a typical data architecture for a merged entity, FutureMart, considering the evaluation report generated in phase 1. You've created new databases, ER diagrams, table structures, initial schemas, and new architectures' capabilities to fill gaps and inefficiencies for FutureMart.

In **phase 3**, you've created a robust data migration plan between TrendyThreads' digital environment and FashionMart's streamlined framework through relational databases management system (RDBMS) to NoSQL databases and vice versa.

In **phase 4**, you've focused on seamless data integration, creating ETL/ETL scripts, developing data pipelines, and designing database backup scripts for automation.

Lastly, in **phase 5**, you'll focus on creating a robust data governance plan for proper data management, security, and compliance.

This lab consists of seven sections. Complete each section individually, save your responses in the given template, and save them.

Let's begin.

Section 1: Draft Data Governance Purpose and Scope for FutureMart

In this section, you'll define the purpose and scope of FutureMart's new data governance plan.

- **Purpose of a data governance plan:** Define the primary objective and purpose for FutureMart, ensuring the integrity, privacy, security, and effective use of data in the e-commerce business.
- **Scope of the data governance plan:** Describe the scope of the data governance plan that aligns with FutureMart's business objectives and areas of the company that manage data, including sales, marketing, customer service, inventory management, and financial data.

Section 2: Draft the Data Governance Objectives

In this section, you'll define clear data governance objectives for FutureMart that align with the business goals and maintain data accuracy, security, and accessibility.

Your data governance objectives should include the following:

- **Data quality:** Create data quality objectives that match FutureMart's requirements. Ensure complete, updated, and accurate data.
- **Data security:** Draft objectives that protect FutureMart's sensitive and personal information from unauthorized access and data breaches.
- **Data compliance:** Create objectives for data compliance that adhere to legal and regulatory requirements of FutureMart.
- **Data availability:** Create objectives for data availability that ensure FutureMart's data is accessible to authorized users.
- **Data consistency:** Draft objectives for data consistency that maintain consistency across FutureMart's data platforms and systems.
- **Data usage:** Draft objectives for data usage that drive FutureMart's business effectively and make data-driven decisions.

Section 3: Draft the Data Governance Framework (Optional)

This section is optional and given for practice purposes. This section won't count toward your score in the final project.

In this section, you'll create a data governance framework for FutureMart. This framework should include key roles, responsibilities, and policies guiding data collection, usage, retention, and security within FutureMart.

Download [Sample Organization Chart of FutureMart.pdf](#) and go through it to understand its organizational structure.

Note: Right click on the link to open it in a new tab.

1. Data governance roles and responsibilities

- **Data governance steering committee:** List data governance steering committee members who oversee the governance process, including senior management, legal, and compliance officers.
- **Data steward:** Identify data steward members and their roles and responsibilities to ensure data quality, integrity, and usage within the department.
- **Data owners:** List data owners responsible for specific datasets and define their roles and responsibilities.
- **Data users:** Identify data users for FutureMart who interact with the data, for example, Data Analyst.

2. Data governance policies

- **Data collection:** Write data collection policies for FutureMart stating how to capture and store customer data.
- **Data usage:** List data usage policy stating how marketing and sales teams leverage data
- **Data retention:** Create a data retention policy to indicate the duration for data storage and when to archive or delete them
- **Data privacy and security:** Write data privacy and security policy for data encryption and masking and provide access controls.

Section 4: Create Data Management Practices

In this section, you'll establish robust data management practices for maintaining data integrity, security, and accessibility across FutureMart.

- **Data classification:** Write data classification practices by defining categories of data based on their sensitivity, such as public, internal, confidential, or restricted. Additionally, mention appropriate handling and protection measures.
- **Data quality management:** Create data quality management practices for implementing processes for validating data quality.
- **Data integration:** Draft data integration practices, including standards for integrating data from various sources.
- **Data documentation:** Create data documentation practices to ensure comprehensive data documentation to maintain accuracy and structure.

Section 5: Create Data Security and Privacy Policies

In this section, you'll create data security and privacy policies to strengthen data security for FutureMart.

- **Data encryption and masking policy:** Create a data encryption and masking policy to protect data for storage and transmission.
- **Data access control policy:** Draft data access control policy for users to ensure only authorized users can access sensitive data.
- **Data incident management policy:** Draft the data incident management policy to define protocols for managing data breaches or unauthorized access incidents.

Section 6: Draft Compliance and Legal Considerations Policies

In this section, you'll draft the compliance and legal considerations policies to ensure accountability and transparency in data for FutureMart.

- **Policy for data regulatory requirements:** Create the policies for data regulatory requirements to list applicable regulations and legal frameworks.

Note: List all the regulatory requirements that apply to FutureMart

- **Data auditing and reporting policy:** Create the data auditing and reporting policies to establish regular auditing processes to ensure compliance with data governance policies and regulatory requirements.
- **Data retention and disposal policy:** Draft the data retention and disposal policy for defining data retention periods based on legal and business requirements, and establish procedures for secure data disposal.

Section 7: Draft Additional Components of Data Governance Plan (Optional)

In this section, you'll draft additional components of data governance plans. This section is optional and given for practice purposes. This section won't count toward your score in the final project.

- **Draft a section for data governance tools and technologies**

This section outlines data management systems, data governance software, and data monitoring and reporting tools. You can choose any technology that fits your organization.

- **Draft a section for data governance training and awareness**

In this section, you can define a plan for training programs and implement regular awareness campaigns to reinforce the importance of data governance.

- **Draft a section for performance metrics and reporting**

In this section, you can create key performance indicators (KPIs), including data quality, security, and compliance metrics, and define reporting structures for leadership and stakeholders.

- **Draft a section for the implementation plan**

In this section, you can create a phased implementation plan and allocate necessary resources, such as tools, personnel, and budget for implementing the data governance framework. You can also establish a process for continuous improvement in the data governance plan.

Summary

Congratulations on completing this **Lab: Create Data Governance Plan for FutureMart**! In this lab, you've created a robust data governance plan for FutureMart to maintain data accuracy, security, and transparency. You've also defined data governance objectives, outlined governance frameworks, data management, privacy, and security policies, and created compliance and regulatory requirements.
