

Assignment Overview: Evaluate Existing Enterprise Data Architecture

Estimated time: 4 minutes

Learning objectives

- Identify key criteria for evaluating the data architectures of **FashionMart** and **TrendyThreads**.
- List the main tasks and expected deliverables for completing the data architecture evaluation assignment.

Introduction

FashionMart, a mature brick-and-mortar chain, has bought **TrendyThreads**, a technology-sophisticated online clothing retailer. The primary goal of this merger is to integrate **TrendyThread's** state-of-the-art digital platform with **FashionMart's** robust physical infrastructure to form a single, complementary enterprise architecture. This combined system will drive an omnichannel retail experience, blending **TrendyThreads'** digital capabilities with **FashionMart's** in-store operations.

The acquisition will be implemented by a phased migration, with the project broken down into the following major phases:

- **Phase 1:** Assess the data architecture of **FashionMart & TrendyThreads**.
- **Phase 2:** Develop the data architecture of the merged entity **FutureMart**.
- **Phase 3:** Convert the data to the new data architecture.
- **Phase 4:** Merge the data systems for smooth data flow within the merged entity.
- **Phase 5:** Prepare the data governance plan for the merged entity.

The project task in this module addresses phase 1 of the project.

Phase 1: Evaluate the data architecture of FashionMart & TrendyThreads

During Phase 1, your responsibility is to thoroughly assess the existing data architectures of FashionMart and TrendyThreads. This assessment is intended to determine gaps, inefficiencies, and improvement areas before the integration process.

References

Right-click and select **Open link in new tab** to review the existing data architectures of [FashionMart](#) and [TrendyThreads](#).

Tasks:

Part 1: Create the enterprise data architecture (EDA) blueprint for FashionMart

In this part, you'll design a comprehensive EDA blueprint for **FashionMart**, including critical architectural layers, tools, and processes to ensure secure and efficient data flow across the organization.

You'll include the following key architectural layers in the EDA blueprint:

- Data sources
- Data ingestion
- Data storage
- Data processing
- Analytics
- Security

Part 2: Create the enterprise data architecture (EDA) blueprint for TrendyThreads

In this part, you'll design a detailed EDA blueprint for **TrendyThreads**, capturing the data flow, analytics capabilities, and governance practices essential for a competitive digital strategy.

The EDA blueprint should include the following key architectural layers:

- Data sources
- Data ingestion
- Data storage
- Data processing
- Analytics
- Personalization & engagement
- Security
- Governance

Part 3: Evaluate FashionMart's data architecture

In this part, you'll assess **FashionMart's** current data architecture by reviewing its key architectural components and documenting strengths and improvement areas across any 3 of the following:

- Data silos
- Legacy systems
- Scalable data architecture
- Data integration capabilities
- Robust data governance
- Performance bottlenecks in data processing
- High availability and disaster recovery plans
- Analytics and BI tools
- Data security measures

Part 4: Evaluate TrendyThreads' data architecture

In this part, you'll analyze **TrendyThreads'** enterprise data architecture to uncover strengths and areas for improvement, particularly in performance, scalability, and security across any 3 of the following key architectural components:

- Data silos
- Legacy systems

- Scalable data architecture
- Data integration capabilities
- Robust data governance
- Performance bottlenecks in data processing
- High availability and disaster recovery plans
- Analytics and BI tools
- Data security measures

By the end of phase 1, you will have a properly documented understanding of the current architectures, facilitating the planning and implementation of the migration and integration process in the upcoming phases.

Deliverables

By the end of Module 1, you will have completed the following deliverables:

- A blueprint diagram of the **Enterprise Data Architecture (EDA)** for **FashionMart**
- A blueprint diagram of the **Enterprise Data Architecture (EDA)** for **TrendyThreads**
- An assessment report highlighting the **strengths** and **areas for improvement** in **FashionMart's** data architecture
- An assessment report highlighting the **strengths** and **areas for improvement** in **TrendyThreads'** data architecture
